DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 19, 2008 has been entered.
2. Claims 11, 14, 21-25 and 27-32 are pending.
3. In Paper No. 5, applicant elected with traverse phenolic acid, specifically cinnamic acid for species D.
4. Claims 11, 14, 21-25 and 27-32 are examined on the merits solely in regards to the elected species.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 11, 14, 21-25 and 27-32 are rejected under 35 U.S.C. 102(b) as anticipated by Camire (J. of Food Protection (1980), vol. 43, no. 1, pp. 36-37).

Camire teaches a cranberry juice composition that has cinnamic acid added to it. The reference teaches adding 3mg, 6mg, and 9mg of cinnamic acid to 100 ml portions of cranberry

juice (see page 36, "Treatment of cranberry juice"). Thus, the reference teaches a cranberry extract, i.e. juice, that is enriched for cinnamic acid because the product of Camire contains more cinnamic acid than would naturally be found in cranberry juice. Applicant's claims state that the composition contains the cinnamic acid in amounts greater than the amounts found in Tomah presscake. Table 12 in applicant's specification shows that Tomah presscake contains 10.52% phenolics but does not disclose a specific amount of cinnamic acid that is present and does not compare this product to cranberry juice itself. The Office does not have the ability to analyze the Tomah presscake to determine exactly how much cinnamic acid is present. Thus, for the sake of examination, any cranberry extract product that is enriched in cinnamic acid is assumed to contain more cinnamic acid than found in Tomah presscake. Note that MPEP § 2113 states that:

Once the examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. In re Marosi, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983).

Thus, applicant can overcome this rejection with a showing of evidence that the product in Camire does not contain as much cinnamic acid as the Tomah presscake or the claimed product.

The references do not teach that the composition has the same pharmaceutical properties claimed by applicant. However, these are considered to be recitations of intended use. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

6. No claims are allowed.
